

**A.W. Jenkinson**  
FOREST PRODUCTS

**A**.W. Jenkinson Forest Products was established in the mid-1960s when its founder, Allan Jenkinson, took the initiative to collect unwanted sawdust and wood shavings from Cumbrian sawmills using a single tractor and trailer. He then transported the timber co-product to the area's farms where sawdust was - and still is - in great demand as livestock and pet bedding.

This original approach with its positive environmental drive has characterised the work of Allan and his team in the intervening years and has remained an important part of the business ever since. Demand outstripped the locally available sawdust needed to supply A.W. Jenkinson Forest Product's growing customer base, which led to partnerships being formed further afield.

Today the A.W. Jenkinson Group includes a growing number of innovative businesses serving the needs of customers across the UK and northern Europe. They are all very different yet cohesive, and range from its haulage and logistics arm, A.W. Jenkinson Transport Ltd, to waste wood suppliers A&A Recycling Ltd or even bovine genetics and breeding specialists A.W. Jenkinson Farms.

hello

# forest products

**H**ardwood or softwood, any species, all grades; A.W. Jenkinson makes use of every part of the tree and is intimately involved in the whole Wood Life Cycle from germination of seedlings to manufactured wood products; and from skip to recycled board products and low-carbon energy. Our group of businesses is at the forefront of the 'green economy' ensuring efficient use of our natural resources and we are constantly striving to reduce waste and increase efficiency throughout the wood supply chain.

Today A.W. Jenkinson Forest Products and its associated businesses handle more than 3 million tonnes of roundwood, chips, shavings, sawdust, bark, green waste and other timber co-products each year. These are collected from forestry sites, sawmills and other wood processing industries throughout the UK. As well as the company's headquarters in Clifton near Penrith, there are A.W. Jenkinson Forest Products permanent sites right across the country, from Kinnoir in the north of Scotland to Tetbury in the south of England.

Our services link forestry, sawmilling, wood processing, building and demolition sectors with the demands of pulp, paper and panel manufacture, energy generation, agriculture, horticulture and amenity markets in an environmentally responsible cycle that makes maximum use of one of the world's dwindling resources.

We offer a wide range of services such as full-site forestry solutions, including clearing and processing with our mobile

chippers and grinders, and transport to our facilities right across the country.

We also offer an extensive range of products such as equestrian shavings, animal bedding, and horticultural and leisure commodities. You will find these in a growing number of suppliers across the UK, from garden centres to country stores, but they can also all be delivered straight to your door in bulk or in pallets. Just give us a call on 01931 712 644 to find out more.

**A**s well as A.W. Jenkinson Forest Products, the Group includes a wood waste arm which includes businesses such as A&A Recycling Ltd and A.W. Jenkinson Woodwaste.

As the UK becomes more reliant on renewable energy for power generation, the drive to reduce the amount of wood disposed of to landfill has increased dramatically.

The A.W. Jenkinson Group as a whole plays a key role in the processing and transporting of all grades of recycled wood around the UK, both for biomass power generation and manufacturing.

The businesses collect and treat both processed and unprocessed recyclable wood products, from a variety of sources, including skip yards, material recycling facilities, civic amenity sites and sawmills. The products are then delivered nationwide by A.W. Jenkinson Transport to power stations, panel board mills and other manufacturers.

As well as the collection and delivery of recyclable wood, the business is also

a major logistics provider for several leading recycling and reclamation businesses. A.W. Jenkinson Transport regularly transports used tins, paper, plastics and scrap metal to mixed recycling facilities assisting with the drive to reduce the amount of waste going to landfill.

# equestrian

## NATURAL FLAKE WOOD SHAVINGS

**Suitable for:** Equine Bedding, Poultry Bedding

Natural Flake is A.W. Jenkinson Forest Product's iconic product - a durable, long-lasting, clean and dry bedding solution for horses, livestock, poultry and wildlife. These big, fluffy shavings, produced from 100% softwood, are incredibly comfortable. They quickly and efficiently absorb moisture, and dust is kept to a minimum.

This premium product is used by everyone from smallholders to Olympic dressage and show jumping riders, equestrian centres, racehorse yards and racecourses throughout the UK.

## SMALL FLAKE WOOD SHAVINGS

**Suitable for:** Equine Bedding, Poultry Bedding

Small Flake is an important product in A.W. Jenkinson Forest Product's range of wood shavings - a durable, long-lasting, clean and dry bedding solution for horses, livestock, poultry and wildlife. These soft, finer joinery shavings, produced from 100% softwood, are incredibly comfortable. They quickly and efficiently absorb moisture, and dust is kept to a minimum. This premium product is loved by dairy and sheep farmers, pet owners and horse riders alike.

## EQUESTRIAN WOODFIBRE

**Suitable for:** Gallops, Menages, Walkways and Play Areas

Equestrian Woodfibre is a quality surface produced in Cumbria. It is suited to a wide range of uses, including equestrian gallops, menages and walkways. This versatile product is free-draining, consistent and low-maintenance, which makes it the ideal wood fibre.

Furthermore the chips are screened for uniformity of size. Safe, dry, long-lasting and easy to apply, this product is used extensively by the equestrian community throughout the country.

## DORMIT

**Suitable for:** Gallops, Menages and Play Areas

Dormit is a premium wood fibre produced in the Cotswolds. It is suited to a wide range of uses, from gallops and arenas for racehorses to walkways and footpaths for golf courses. Dormit is produced from virgin woodchips, hammer milled into woodfibre guaranteeing a consistent size and specification - they bond perfectly

with one another, which results in a more even surface area. This acts like a 'cushion' between the base membrane and the horse, leaving little chance of after-shocks, vibrations or damage to either horse or membrane.

# bedding

### **DRY SAWDUST**

**Suitable for:** Livestock Bedding, and Poultry Bedding

This is a highly absorbent, kiln-dried dust with an average moisture content of under 15%. Its soft, small particles create a comfortable bed for cattle, making our Dry Sawdust ideal for all types of housing including mattresses or concrete cubicles. This unique product is a clean and easy-to-use bedding solution, allowing for ease of flow through slurry systems. It can be delivered straight to your door, loose or in bales.

### **POWDER DRY SAWDUST**

**Suitable for:** Livestock Bedding, and Poultry Bedding

This is a highly absorbent and extremely dry dust, with an average moisture content of 6%. Its dry qualities result in a reduction in bacterial growth. By using this product, you will help keep noxious pathogens at bay and prevent issues such as hock rubbing. This soft premium bedding solution is highly absorbent, making it ideal for cubicles and mattresses. Your cows will be clean and comfortable, which could boost their yield.

### **ECONOMY DRY SAWDUST**

**Suitable for:** Livestock Bedding, and Poultry Bedding

This is a highly absorbent, extremely dry product, with an average moisture content of 6%. It is perfect for a range of cattle housing such as cubicles or loose housing. Its fine texture ensures animals are kept dry and clean. This sawdust is unprocessed so cheaper to produce - this means it offers fantastic value for money, allowing for great economies of scale on your farm. It can be delivered in bulk straight to your door.

# gardening & leisure

### **ALL-PURPOSE NATURAL COMPOST - PEAT-FREE**

**Suitable for:** Potting, Planting, Hanging Baskets and Soil Improver

An environmentally friendly all-rounder product suitable for indoor plants and outdoors in your garden. It is based on premium quality ingredients, enriched with naturally occurring nutrients and balanced fertiliser levels to ensure healthy plants at all stages of growth and under a variety of situations, for use all year round. This product is free from peat, an increasingly rare natural resource.

### **COMPOSTED BARK FINES**

**Suitable for:** Soil Improver, and Weed Suppression

Composted Bark Fines is a long-lasting, durable and natural fine bark mulch. It is ideal for all kinds of flower beds, borders and large containers, and provides optimum weed suppression and moisture retention. This is a composted product, so is more durable than other bark products and enriches soil fertility over time by slowly releasing nutrients into soil. With its rich dark colour, it creates an inviting and natural appearance in your garden.

### **PINE BARK NUGGETS**

**Suitable for:** Ornamental Mulch, Weed Suppression, Children's Play Areas

Pine Bark Nuggets is a premium-grade, natural bark which lasts much longer than other bark products. It can be used as ornamental ground cover for beds and borders, providing a clean visual background that will showcase flowers and foliage when used as a mulch. As well as making your garden look attractive, it can help suppress weeds, and retain soil moisture during dry spells. It is also certified for use in play areas.

### SOIL CONDITIONER

**Suitable for:** Mulch for Beds and Borders, Weed Suppression, Soil Enricher

Soil Conditioner is a long-lasting, durable and natural fine bark mulch. This material is ideal for all kinds of flower beds, borders and large containers, and provides optimum weed suppression and moisture retention. This is a composted product, so is more durable than other bark products and enriches soil fertility over time by slowly releasing nutrients into soil.

### HARDWOOD PLAY CHIPS

**Suitable for:** Borders, Weed Suppression, Play Area Safety

Hardwood Play Chips is a long-lasting, durable and natural product. It combines the highly decorative qualities of a natural mulch providing an attractive finish to beds and borders with the shock-absorption and cushioning characteristics of a product certified for use in play areas (complies with BS EN1177 standard). It is easy to maintain and provides an attractive but very safe surface for playgrounds and gardens.

### DECORATIVE BARK

**Suitable for:** Ground Cover, Borders and Weed Suppression

Decorative Bark is a long-lasting, natural product. It can be used as ornamental ground cover for beds and borders, and it provides a clean visual background that will showcase flowers and foliage when used as a mulch. As well as making your garden look attractive, it can help retain soil moisture during dry spells. This bark also helps to suppress weed growth, so you spend less time weeding and more time enjoying your garden.

## FARMYARD MANURE

**Suitable for:** Mulching, Planting Out, Improving Soil Structure

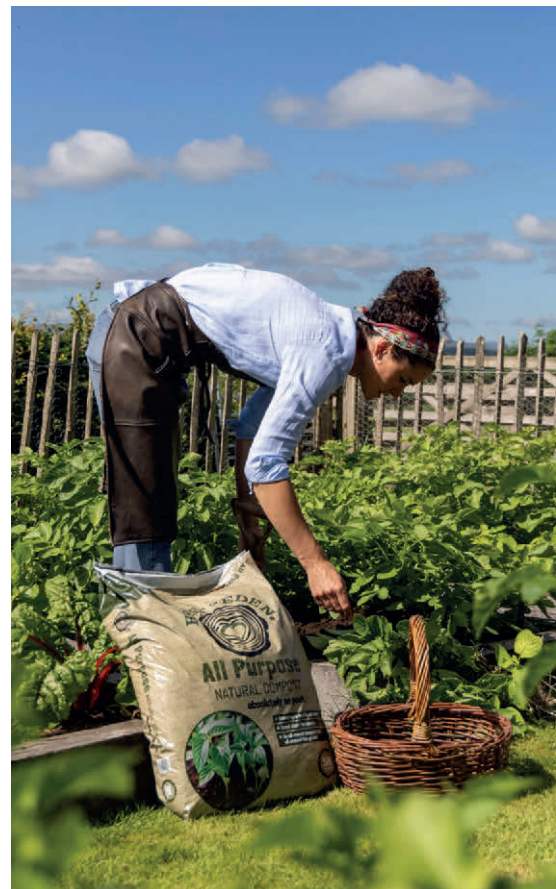

Farmyard Manure is a rich source of natural nutrients and organic matter which is formulated to boost the fertility of the soil in your garden and allotment. It brings structure to light and sandy soils, helps moisture retention and can lighten heavy soils. Its benefits also include attracting worms to the soil and acting as a natural source of nitrogen in the garden. It is ideal for roses and shrubs, bed and borders, and mulch.

## ORGANIC GREEN COMPOST

**Suitable for:** Soil Improver, Mulching, Planting out

Organic Green Compost is a basic source of natural nutrients and organic matter which is formulated to improve the fertility of the soil in your garden and allotment. It helps moisture retention during dry periods and can lighten heavy soils. It also encourages good plant growth and long-term soil fertility. Organic Green Compost can be used as part of a soil health boosting programme.

# transport

**T**o better serve the needs of A.W. Jenkinson Forest Products' extensive third party customer base, as well as the ongoing and expanding transport requirements of the wider A.W. Jenkinson group, the logistics operation was incorporated in spring 2014 to create A.W. Jenkinson Transport Limited.

With its instantly recognisable green-and-white livery and 'three trees' logo, the fleet is a familiar

sight on the nation's roads, from Truro right up to Thurso and from busy motorways to country lanes.

Thanks to our ever-growing fleet, we do more than haul goods - we connect businesses, building bridges between suppliers, producers and end users.

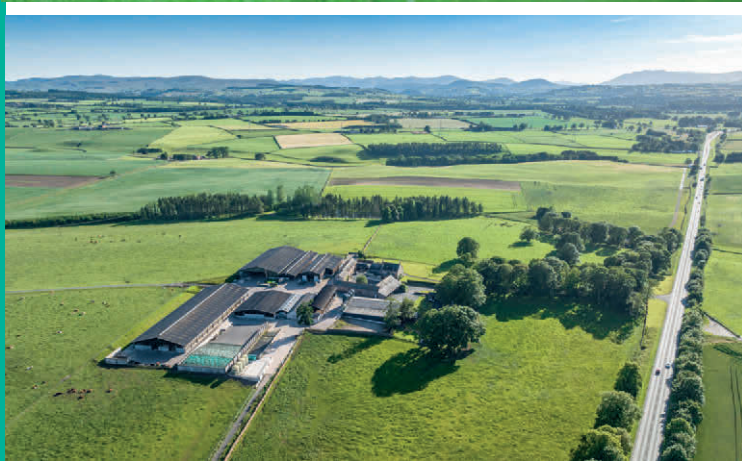

We strive to create a more efficient and sustainable approach to logistics, helping our customers – large or small – grow their business with our bespoke, cost-effective delivery and

distribution solutions.

Our modern fleet comprises more than 900 vehicles, perfectly suited to a variety of jobs, whether it's hauling logs from the heart of a Scottish forest or transporting bags of peat-free compost to a garden centre.

A great team is an essential part of the process. Behind the drivers is a large support network of highly skilled specialists including mechanics, trainers and planners.

# farming

**F**arming isn't just our passion, it's in our blood. The A.W. Jenkinson Group, which includes A.W.

Jenkinson Farms, was founded in the 1960s by Allan Jenkinson, who sold sawdust to local farmers.

At the heart of A.W. Jenkinson Farms is Whinfell Park, a farm nestling in the heart of the fertile Eden Valley in Cumbria. Our main activities revolve around bovine genetics and breeding - our pedigree Limousin bulls and cows are some of the very best in the breed, and their quality has made the headlines around the world. In 2021, we acquired a cow called Wilodge Poshspice for a world record-breaking price of 250,000gns (£262,000).

This activity is completed by sheep and arable farming, as well as shooting.

We run a fleet of modern and efficient machinery and we continuously invest in farming innovations, but it takes a lot more than good equipment to make a success of a business like ours - our real strength lies in our team of skilled and experienced stockmen, tractormen and other stewards of the land.
